

A WINTER WARMING

DROPS

DROPPED OBJECTS
PREVENTION SCHEME

Dropped Objects can and do occur anywhere and anytime, but statistics show that we are more exposed to Dropped Objects during winter months.

❄ Before undertaking any task, consider the prevailing weather. High winds, hail, sleet, snow or poor visibility can all increase the risk of potential dropped objects.

❄ Ensure ice and snow is removed from the top of containers, skid bases, forklift pockets and loads prior to back loading.

❄ Regularly clear any build-up of ice or packed snow from structures, walkways etc. Regular jarring of the derrick can also help shake loose ice in a controlled manner.

❄ Warm your hands before manual lifting or using tools – statistics show that far more objects and tools are dropped in winter due to cold hands.

**DROPPED OBJECTS
DO HARM AND DO KILL!**
