ISSUE # 02-2022

# Floorhand Struck by Rod Transfer

POTENTIALLY SERIOUS INCIDENT

## **Description:**

While servicing a well, a floorhand pushed a suspended rod string over the floor. As it was lowered to latch into the transfers, the rod string got hung up on the rig floor causing the rod to twist and detach from the rod transfer and carabiner. The rod transfer and rod string fell approximately 14 meters, and the rod transfer struck the floorhand on the wrist causing injury.

### **What Went Wrong:**

- A single-action carabiner was used. This incorrect equipment was not identified during inspection when the rig was raised, nor was the proper carabiner identified in the safe operating procedure (SOP).
- The crew was experienced but had not stood rods in recently.
- Pressure for operational efficiency did not allow adequate setup.

## **Actions Taken/Recommendations:**

- All single-action carabiners were removed from service and replaced with locking carabiners.
- The SOP was reviewed and updated to identify the approved equipment.
- A safety stand-down led by the prime contractor was conducted to communicate the importance of taking time to prepare and perform the job safely.

The single-action carabiner from the incident

Body

### N-252G Steel Carabiner 3600 LBS gate strength Alloy steel, heat treated

 Art. No.
